SINCE 1980

STARK HIGH-PRESSURE DUST SUPPRESSION SYSTEM

SWEEPING

- **STARK High-pressure dust suppression system is designed for professional use.**
- **The system makes your STARK sweeper even more versatile and efficient.**
- **High-pressure dust suppression system is available for all STARK collecting sweepers and bucket sweepers.**

High-pressure dust binding:

- Optimized pressure and flow ratio significantly reduces water consumption and adhesion of the sweeping material in the trash container.
- High-pressure water mist binds dust particles very efficiently.
- Droplet size is designed for sweeping. A small droplet size enables a larger active surface area, which means more efficient dust suppression and lower water consumption.
- High Pressure Dust Suppression system uses a high-quality, reliable and efficient Dynaset high-pressure water pump manufactured in Finland; output 30 l/min, pressure 200 bar, capacity 12 kW.

High-pressure washing device:

- STARK high-pressure washing device increases the functionality of the sweeper. For example, the cleaning of bus stops, traffic dividers and machinery is quick and easy. High-pressure washing device reaches places where the sweeper cannot reach.
- The hose reel (15 m) is self-rewinding
- The professional high-pressure washing pistol is a sustainable choice.
